Field Assistants

**Job Type:** full-time temporary position

**Opportunity location:**

**Closing date (if specified):** 15 Mar 2008

**Opportunity Description:**

FIELD ASSISTANTS (2) needed from mid April – mid June for research on conservation and behavior of rare forest birds on the Island of Hawaii. Project goals are to determine how birds use and move between natural habitat islands. Field work will involve primarily mistnetting and banding birds but also re-sighting, behavioral observations, seed trap and germination studies, habitat measurements, and possible arthropod sampling. This study requires hiking off-trail in Hawaiian rain forest from early in the morning. Banding experience strongly desired. Preference will be given to applicants with prior experience/current residence in Hawaii. Candidates should have a strong interest in conservation biology and restoration ecology. Salary will be $1200/month plus housing. Advantages of this position include doing conservation science with a dynamic interdisciplinary team of researchers from Stanford University, and working and playing in one of the most biologically unique places on earth. Please send a letter of interest, resume/cv, and the names and contact information for three references to DR. LIBA PEJCHAR (EM: liba@stanford.edu) by March 15.
