Job Type: Volunteer - Temporary  
Positions Available: 2 – 3  
Duration: 8 - 9 months (19 July 2010 to April 2011)  
Location: Laysan Island  
Closing Date: Jun 14, 2010*

Description:
US Fish and Wildlife is seeking 2-3 volunteers for the winter field season on Laysan Island (August to March). Laysan Island is a 1000 acre coralline island located about 900 miles northwest of O'ahu. The island frequently referred to as the “jewel” of Papahanaumokuakea Marine National Monument. It hosts ~ 1 million seabirds and the following six endangered species: Laysan Finch, Laysan Duck, Hawaiian Green Sea Turtle, Hawaiian Monk Seal, *Cyperus pennatiformis* var. *bryantii* (an endemic sedge), and *Pritchardia remota* (a fan palm). It is considered to be among the most intact terrestrial ecosystems in the Northwestern Hawaiian Islands and the only island with an inland lake. For more information on Laysan Island see [http://papahanaumokuakea.gov/about/laysan.html](http://papahanaumokuakea.gov/about/laysan.html)

As a volunteer you will have the opportunity to live in this remote setting. You will be surrounded by birds, sea life, and native vegetation. Laysan is a remote site, only accessible by ship. It is a four day ship ride from Oahu to Laysan. On the island, all transportation is by foot. Living conditions consist of an 8x10 weatherport tent for personal use, and several 16x20 tents for communal/food storage and prep/working. Personal communications from the field site are limited to “text only” e-mail (no internet).

Additionally, in an effort to prevent the introduction of non-native species, the USFWS enforces a quarantine on the island. As part of this quarantine, all “soft” (clothing, shoes, straps, etc) must be purchased new and frozen 48 hours prior to departure to Laysan. All “hard” items (cameras, musical instruments, snorkeling equipment, etc.) may either be inspected and cleaned thoroughly and frozen or bug bombed prior to departure.

Volunteers are expected to work 40 hours/week. However, this does not necessarily mean 8-5 M-F. Certain projects must be completed in the evening or in consecutive days. Primary responsibilities of the Winter Tour include the following:

- **Invasive plant monitoring and removal (~50% of time)**
- Native plant propagation
- Vegetation surveys
- Bird surveys (including several Laysan and Black-foot Albatross studies, Laysan Duck monitoring, and shorebird surveys)
- Green sea turtle nest monitoring
- Entomological surveys
- Data collection and management
- Weekly and summary reporting
- Camp maintenance

Requirements: Must be able to walk 10 miles per day, lift 50 lbs, capable of identifying birds by call, comfortable with herbicide use, and have full color eyesight correctable to 20/20. Individuals are expected to work together as a team to conduct biological, data, report writing and maintenance work as well as household chores. Safety in this remote setting is of primary concern and all individuals must work together as a team to maintain good communication at all times.

Prior experience in the following is recommended: invasive species control and mapping, plant propagation, handling endangered species, and bird identification and banding.

The US Fish and Wildlife Service will provide: housing and a living stipend in Honolulu, transportation between Honolulu and Laysan, a stipend for quarantine clothes, and food and housing on Laysan.

*Applications will be evaluated as they arrive, and these positions will be filled quickly. Additionally, international applicants should submit their paperwork immediately to allow adequate time for visa acquisition.*

Please submit a cover letter, resume, and at least three references to:
