• **Job Title:** Field Technicians Needed in Maui  
  **Job Type:** full-time temporary position

**Closing date (if specified):** 10 Jul 2010

There is a major effort underway to try to eradicate coqui frogs from Maui. The purpose of this project is to monitor the effectiveness of these control efforts. I am hiring 3 people to help monitor frog populations in the Maliko Gulch, Maui.

The pay will be $10/hour for full-time work, possibly more based on experience-level. There are no other benefits, but you will be covered by workers’ compensation while working. You must be available to start August 1 and to work for three months. Housing and travel to the island will not be covered as part of the job.

The work will primarily be at night (between 7pm and 1 am). You will be performing population estimates of frogs including using mark-recapture, distance sampling, and sound measurement methods. There will be some daytime work to set up field sites. The terrain is extremely rough, and we will be sampling in areas that are extremely steep. We will also be working on some very wet, rainy nights.

Preferred qualifications:
1. Interest in gaining wildlife field experience.
2. Interest in control and eradication efforts of invasive species.
3. Experience and willingness to work in strenuous outdoor conditions.
4. Great attention to detail.
5. Previous work with herps a plus!
6. Experience working well in a group setting.
7. Willingness to work nightly some times for two weeks consecutively with only days off during these periods.
8. A love of the outdoors.

If you’re interested, please send me a cover letter and CV with three references. I will start reviewing applications as they come in and hire by July 10.
