

Kipuka Project Part Time Help

We are seeking a current student to assist with a NSF funded study of the impacts of introduced rodents in kipuka on Mauna Loa. The work will consist primarily of helping to maintain our snap trap grid to reduce rat populations in the area. The field work will involve walking over rough terrain, working in potentially inclement weather conditions and navigating in remote areas. In addition to field work, some data entry and sample processing in the lab may also be included in the job duties. The selected candidate will be hired through the US Forest Service under the Student Temporary Employment Program (STEP). **Only students enrolled at least half time** are eligible for the STEP program. The position is targeted to begin in late Aug. and will pay ~\$9-10/hr for up to 20hrs/wk. The selected individual must be able to commit 1-2 full days during the week. Position details are still being finalized and are subject to change. For more information and to apply for the position, please send a resume to Devin Leopold (devin.leopold@gmail.com)
