Subject: [OISC-L:269] OISC - Reprioritization of Species candidates

06/19/2003 01:11 PM  
Please respond to oisc-l

Hello All,

This is a call for species candidates for the upcoming OISC annual reprioritization of species meeting in September.

I would like to compile a list of candidate species that people would like to consider as potential OISC targets for 2003 - 2004. We would like to get this list as soon as possible so we can research the species and present it at the meeting.

If you have a species that you feel should be considered, please send me the name and as much information about the species as you are able including: biology, current distribution on the O'ahu, and Hawaii, invasiveness, etc.

Thus we hope to maximize our time and be able to make an educated decision when voting on species regarding its distribution, invasiveness and feasibility of control.

Thank you

Ryan Smith
