

Australia/New Zealand Weed Risk Assessment adapted for United States.

Data used for analysis published in: Gordon, D.R. and C.A. Gantz. 2008. Potential impacts on the horticultural industry of screening new plants for invasiveness. Conservation Letters 1: 227-235. Available at: <http://www3.interscience.wiley.com/cgi-bin/fulltext/121448369/PDFSTART>

<i>Araiostegia pseudocystopteris</i>			
Question number	Question	Answer	Score
1.01	Is the species highly domesticated?	N	0
1.02	Has the species become naturalised where grown?		
1.03	Does the species have weedy races?		
2.01	Species suited to U.S. climates (USDA hardiness zones; 0-low, 1-intermediate, 2-high)	2	
2.02	Quality of climate match data (0-low; 1-intermediate; 2-high)	2	
2.03	Broad climate suitability (environmental versatility)	N	0
2.04	Native or naturalized in regions with an average of 11-60 inches of annual precipitation	Y	1
2.05	Does the species have a history of repeated introductions outside its natural range?	Y	1
3.01	Naturalized beyond native range	N	-2
3.02	Garden/amenity/disturbance weed	N	0
3.03	Weed of agriculture	N	0
3.04	Environmental weed	N	0
3.05	Congeneric weed	N	0
4.01	Produces spines, thorns or burrs	N	0
4.02	Allelopathic		
4.03	Parasitic	N	0
4.04	Unpalatable to grazing animals		
4.05	Toxic to animals	N	0
4.06	Host for recognised pests and pathogens		
4.07	Causes allergies or is otherwise toxic to humans	N	0
4.08	Creates a fire hazard in natural ecosystems		
4.09	Is a shade tolerant plant at some stage of its life cycle		
4.1	Grows on one or more of the following soil types: alfisols, entisols, or mollisols	Y	1
4.11	Climbing or smothering growth habit	N	0
4.12	Forms dense thickets		
5.01	Aquatic	N	0
5.02	Grass	N	0
5.03	Nitrogen fixing woody plant	N	0
5.04	Geophyte	?	
6.01	Evidence of substantial reproductive failure in native habitat	N	0
6.02	Produces viable seed	?	
6.03	Hybridizes naturally		
6.04	Self-compatible or apomictic		
6.05	Requires specialist pollinators	N	0
6.06	Reproduction by vegetative fragmentation	Y	1
6.07	Minimum generative time (years)		
7.01	Propagules likely to be dispersed unintentionally (plants growing in heavily trafficked areas)		

7.02	Propagules dispersed intentionally by people	Y	1
7.03	Propagules likely to disperse as a produce contaminant	N	-1
7.04	Propagules adapted to wind dispersal	Y	1
7.05	Propagules water dispersed		
7.06	Propagules bird dispersed		
7.07	Propagules dispersed by other animals (externally)		
7.08	Propagules dispersed by other animals (internally)		
8.01	Prolific seed production	Y	1
8.02	Evidence that a persistent propagule bank is formed (>1 yr)		
8.03	Well controlled by herbicides		
8.04	Tolerates, or benefits from, mutilation or cultivation		
8.05	Effective natural enemies present in U.S.		
Total Score			3

Outcome	Accept*

*Used secondary screen from: Daehler, C. C., J.L. Denslow, S. Ansari, and H. Kuo. 2004. A risk assessment system for screening out harmful invasive pest plants from Hawaii's and other Pacific islands. Conserv. Biol. 18: 360-368.

section	# questions answered	satisfy minimum?
A	11	Yes
B	6	Yes
C	10	Yes
total	27	Yes

Data collected 2008

Question number	Reference	Source data
1.01		used horticulturally, but no evidence of significant modification
1.02		
1.03		
2.01	1. PERAL NAPPFAST Global Plant Hardiness (http://www.nappfast.org/Plant_hardiness/NAPPFAST%20Global%20zones/10-year%20climate/PLANT_HARDINESS_10YR%20lgn.d.tif). 2. Flora of China (http://flora.huh.harvard.edu/china/mss/volume03/Davalliaeae-MO_reviewing.htm). 3. Iwatsuki, K. (1988) An enumeration of the Pteridophytes of Nepal. In The Himalayan Plants, Volume 1. Edited by H. Ohba and S.B. Malla. 1988. Bulletin No. 31. http://www.um.u-tokyo.ac.jp/publish_db/Bulletin/no31/no31018.html .	1. Global hardness zones 9-13. 2. Guangxi, Sichuan, Guizhou, Yunnan, Xizang [Bhutan, India, Laos, Myanmar, Nepal, Sikkim, Sri Lanka, Thailand (north), Vietnam]. 3. N India, SW China, Upper Burma, and N Thailand (not actually collected in Nepal). [tropical to subtropical]
2.02		

2.03	1. Köppen-Geiger climate map (http://www.hydrol-earth-syst-sci.net/11/1633/2007/hess-11-1633-2007.pdf). 2. Flora of China (http://flora.huh.harvard.edu/china/mss/volume03/Davalliacae-MO_reviewing.htm). 3. Iwatsuki, K. (1988) An enumeration of the Pteridophytes of Nepal. In The Himalayan Plants, Volume 1. Edited by H. Ohba and S.B. Malla. 1988. Bulletin No. 31. http://www.um.u-tokyo.ac.jp/publish_db/Bulletin/no31/no31018.html .	1. Two climatic regions. 2. Guangxi, Sichuan, Guizhou, Yunnan, Xizang [Bhutan, India, Laos, Myanmar, Nepal, Sikkim, Sri Lanka, Thailand (north), Vietnam]. 3. N India, SW China, Upper Burma, and N Thailand (not actually collected in Nepal).
2.04		1. For the provinces listed, average annual precipitation ranges from 2 inches/year to greater than 196.9 inches/year. 2. For Bhutan: "Average annual precipitation varies from 1,020 to 1,520 mm (40 to 60 inches)"; For Laos: "average annual precipitation varying from 1,270 mm (50 inches) to 2,290 mm (90 inches) depending on the region"; For Myanmar: "The coastal and high mountain precipitation varies between 2,500 to 5,000 mm (98 to 196 inches) annually with the interior receiving 1,000 mm (39 inches) or less.>"; For Nepal: "Average annual precipitation decreases from 1,778 mm (70 inches) in the east to 899 mm (35 inches) in the west"; For Sri Lanka: "average annual precipitation varies between 1,270 mm and 1,900 mm (50 and 75 inches) on the southeast plains to between 2,540 mm and 5,080 mm (100 and 200 inches) on the southwest plains.>"; For Thailand: "Average annual precipitation varies from 1,020 mm (40 inches) to 2,030 mm (80 inches) depending on the region."; For Vietnam: "Average annual precipitation in Hanoi is 1,830 mm (72 inches) with areas in the Annamite Mountains exceeding 4,060 mm (160 inches)". 3. For Northern India, average annual precipitation ranges from less than 10 inches/year to greater than 80 inches/year, however the less than 10 inches range is a relatively small proportion of the distribution.
